CHECKLIST

LARP weapon safety check preparation

- [ ] Inspect the full length of the core for cracks or splits
- [ ] Round or cap any exposed core ends
- [ ] Press the padding along the whole blade, including the tip and edges
- [ ] Replace foam that feels compressed or thin compared with when it was new
- [ ] Check the outer covering for tears or loose seams
- [ ] Remove any exposed tape, staples or pins near the strike surface
- [ ] Bring the weapon fully assembled to the check, not in separate parts
- [ ] Pack spare foam, tape and covering material for same-day repairs
